

Sovereign Hybrid Cloud Storage for European Organizations with Tiger Technology and Leviia

Combine the power of Tiger Bridge and Leviia Storag3 to ensure full control, compliance, and resilience across on-premises and cloud environments.

Solution Overview

Tiger Bridge and **Leviia Storag3** offer a unified hybrid cloud storage solution for critical sectors like healthcare, media and entertainment, government, and surveillance. Tiger Bridge seamlessly extends on-premises storage to Leviia Storag3 fully sovereign, GDPR-compliant cloud storage hosted entirely in the EU.

Designed for environments handling growing volumes of sensitive unstructured data, the joint solution enables efficient replication, offsite archiving, and cloud-based disaster recovery - while keeping active operations running locally at full speed.

True Sovereignty and Regulatory Compliance

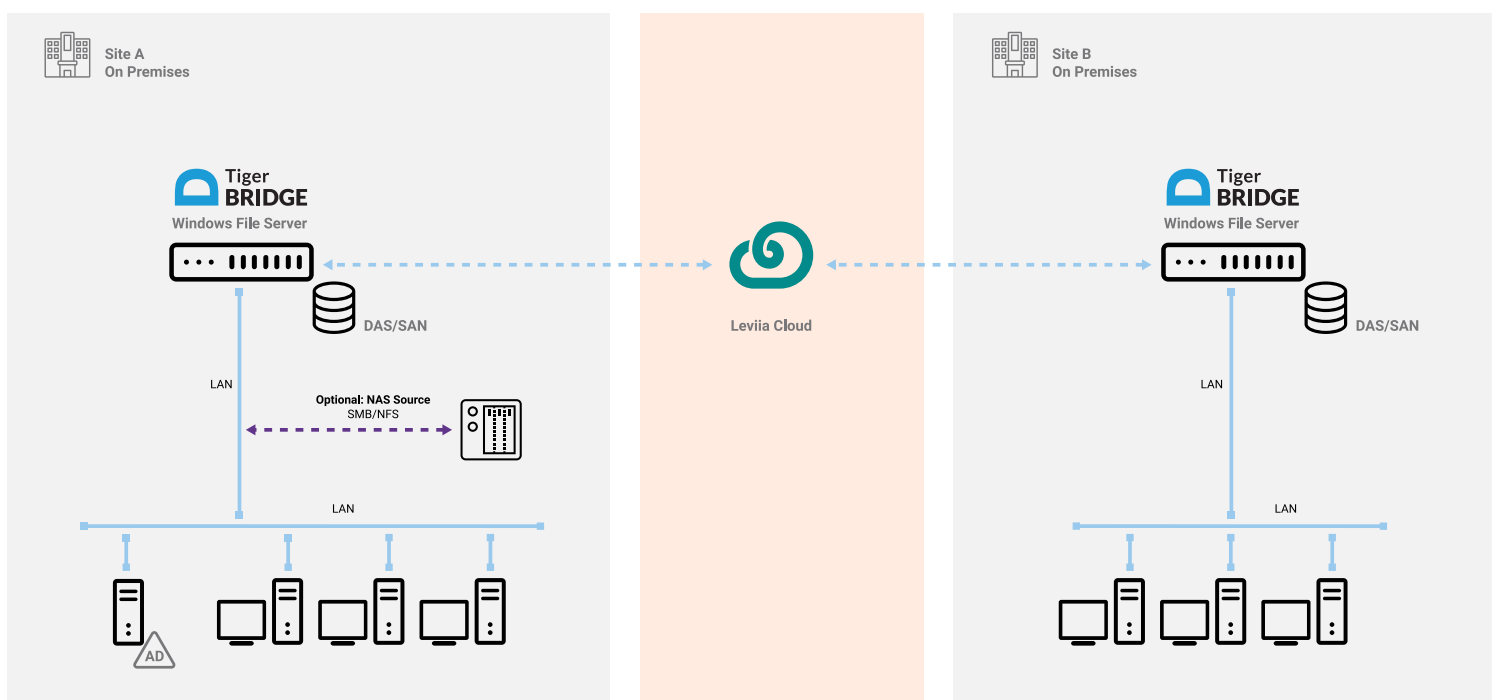

Leverage Leviia's fully EU-owned, sovereign infrastructure with strong encryption and data residency guarantees. Together with Tiger Technology's on-premises-first approach, the solution ensures GDPR compliance.

Data Resilience and High Availability

Leviia ensures 99.999999999% durability with geo-replication across EU data centers. Tiger Bridge enables real-time replication of essential files for a rapid recovery and business continuity in the event of local hardware failure or data loss.

Seamless Cloud Integration

Tiger Bridge extends local storage to the cloud without disruption, enabling scalable, efficient operations while maintaining full control. It simplifies cloud adoption and keeps critical live systems running smoothly.

Use Cases

Tiger Bridge with Leviia Storag3

Hybrid Cloud File Management

Seamlessly extend local file servers into the cloud to handle growing unstructured data (e.g., media, medical, CAD files).

Data Sovereignty & Compliance

Support GDPR and industry-specific retention policies by storing data in Leviia's EU-based, ISO 27001-certified infrastructure.

Disaster Recovery

Replicate essential files to Leviia Cloud to ensure rapid recovery and business continuity in the event of local hardware failure or data loss.

Active Archival

Maintain fast access to recent files while safely archiving older or infrequently accessed data to Leviia's cost-efficient object storage.

Solution Capabilities

Tiger Bridge enables seamless data movement between on-premises and cloud environments for unified, efficient storage.

- **Single global namespace** unifies local storage and the cloud into a single, scalable file system.
- **User defined policies** offload cold data to Leviia low-cost storage automatically.
- **Multi-site sync** enables real-time collaboration across locations.
- **Data protection** through real-time replication and version management guarantees infinite recovery points and a much lower performance impact on CPU and storage resources compared to scheduled backups. RTO and RPO within seconds.
- **TLS-encrypted transfers** with integration into Leviia's advanced security stack to ensure data is not read or modified in transit.
- **S3-compatible API** for full interoperability with existing tools and workflows.

Leviia Storag3 is the only S3-compatible storage solution that combines cutting-edge security, full cost control, and true European sovereignty.

Your data is hosted exclusively within the EU, across three ISO 27001 and HDS-certified data centers located in France - ensuring full GDPR compliance and protection from extraterritorial laws like the Cloud Act.
