

Your Risk-Free Sovereignty Journey

Tiger Technology is the only European-headquartered data management company to guarantee a seamless, stress-free sovereignty transition.

The Risk

Non-European cloud providers remain subject to foreign surveillance laws - even when hosting data in Europe. The EU's top court has struck down two EU-US data frameworks on exactly these grounds.

Why Tiger Bridge

Every European S3 Cloud Supported

Connects natively to all major EU-based sovereign cloud targets.

Zero Data Lock-In

All data stored in native format. Switch providers freely, at any time.

Minimal-Disruption Migration

Data moves silently in the background. Downtime minutes not hours or days.

Continuous Protection & Ransomware Guard

Every file version replicated within seconds. Mass-encryption detected and blocked before it reaches the cloud.

Proven at Scale

All S3

Targets Supported

>60%

Storage Cost Reduction

Migration Disruption

How the Transition Works

1

Sovereignty Assessment

We map your cloud footprint, identify compliance exposure, and recommend the right target.

2

Background Migration

Tiger Bridge replicates your data to European sovereign storage silently.

3

Verify and Cut Over

Checksums validate every file. Cutover is a single configuration change.

4

Ongoing Sovereignty

Tiger Bridge stays as your hybrid data layer: tiering, versioning, sync, and ransomware protection.

“Tiger Bridge requires no changes to existing infrastructure. The integration was seamless - and we now have full multi-cloud CDP coverage.”

- Senior Infrastructure & Security Manager, EMEA
